ClinVar P/LP vs B/LB
(≥2 stars, 45% P/LP)
Platt scaling: common
score scale $q(s)$
Assay labels, part $\mathcal{A}$
(one variant per residue)
Per-class thresholds
(miss rate $\leq \alpha$)
Assay labels, part $\mathcal{B}$
(one variant per residue)
Certify likelihood ratios
(exact, after selection)
Target variants
(e.g. VUS), score $q(s)$
apply thresholds
Calls: LoF, functional
or abstain; each call
type with a certified
likelihood ratio for
the assay outcome
